

Project Tech Stack Summary

Frontend Technologies

1. React.js & Vite: Core UI library and high-performance build tool for the user interface. (Link: <https://react.dev/> & <https://vitejs.dev/>)
2. Framer Motion: A React library used to easily create smooth, complex animations and gestures for UI elements. (Link: <https://www.framer.com/motion/>)
3. React Simple Maps & D3-Geo: Libraries used together to render interactive SVG-based geographic maps. (Links: <https://www.react-simple-maps.io/> & <https://github.com/d3/d3-geo>)
4. jsPDF & jsPDF-AutoTable: Client-side tools used to generate, format, and download offline PDF reports directly from the browser. (Links: <https://github.com/parallax/jsPDF>)

Backend Technologies

1. FastAPI: High-performance web framework used for building the backend APIs. (Link: <https://fastapi.tiangolo.com/>)
2. NetworkX: Python package for creating, manipulating, and studying the structure and dynamics of complex networks. (Link: <https://networkx.org/>)
3. Pandas: Powerful library for robust data manipulation, structuring, and processing. (Link: <https://pandas.pydata.org/>)
4. Geopy: Client for several popular geocoding web services, used for dynamic geocoding of locations. (Link: <https://geopy.readthedocs.io/>)
